DATA SCIENCE

Machine Learning – Modelos em Produção

Evidentemente – os **Modelos Preditivos** desenvolvidos e treinados por **Cientistas de Dados** precisam chegar até o “mundo real” – o chamado ambiente produtivo. Também conhecido como o ambiente de **Produção**.

Why do 87% of data science projects never make it into production?

VB STAFF JULY 19, 2019 4:10 AM

"If your competitors are applying AI, and they're finding insight that allow them to accelerate, they're going to peel away really, really quickly," Deborah Leff, CTO for data science and AI at IBM, said on stage at Transform 2019.

On their panel, "What the heck does it even mean to 'Do AI'?" Leff and Chris Chapo, SVP of data and analytics at Gap, dug deep into the reason so many companies are still either kicking their heels or simply failing to get AI strategies off the ground, despite the fact that the inherent advantage large companies had over small companies is gone now, and the paradigm has changed completely. With AI, the fast companies are outperforming the slow companies.

Help! My Data Scientists Can't Write (Production) Code!

 August 13, 2019 by [Editorial Team](#) [Leave a Comment](#) 

 tweet  share  share  email

Businesses across the world are hiring data scientists to beef up their efficiency and competitiveness via artificial intelligence (AI). Startup companies (dubbed AI-First companies) are disrupting traditional industries like banking, insurance, real estate and healthcare using AI technologies.

The demand for data scientists far exceeds supply. And, the problem is exacerbated by the fact that the data scientist profession is itself splitting into multiple sub-disciplines. Some examples of this divide include:

- Decision scientists have domain expertise and specialize in linking the domain knowledge and the algorithm to solve a problem.
- Data scientists have expertise with machine learning (ML) and related algorithmic fields at the application level, i.e., they know how to apply algorithms to data sets to generate successful experimental insights.
- ML research scientists can create new algorithms to solve more custom problems or adapt/exploit recent research advances.

Regardless of which of these skill-sets are needed, businesses face a common problem when trying to monetize successful AI experiments. None of the above skill-sets are required to include a strong competency in production software development. This is not the key value the data scientist brings to the problem. It is, however, a critical aspect of getting an ML application (which itself is a program, frequently in Python, R or Java) running for a business purpose. Not only that – the level of programming interest and capability varies widely from role to role and individual to individual.

INDUSTRY PERSPECTIVES

The Bots Have Arrived (What's New?)

In this special guest feature, Karl Chan, President and Chief Technology Officer at Laserfiche, believes that as the sheer amount of data continues to rise, humans alone will not be able to meet the challenge of managing and processing it. Bots, already widely deployed for everything from customer service requests to medical operations, are the solution for today's organizations that need to collect data from multiple, disparate sources, manage and process it, and put it to use.

[\[READ MORE...\]](#)

<https://insidebigdata.com/2019/08/13/help-my-data-scientists-cant-write-production-code/>

<https://dzone.com/articles/learn-how-to-setup-a-cicd-pipeline-from-scratch>

Neste contexto é fundamental que Cientistas de Dados tenham o conhecimento do fluxo de atividades e operações que leva o software até o ambiente produtivo – o **PIPELINE** de desenvolvimento. Permitindo então desta maneira que o software desenvolvido seja feito, desde sua concepção, com todos os requisitos necessários para a entrega no ambiente produtivo, o mundo real.

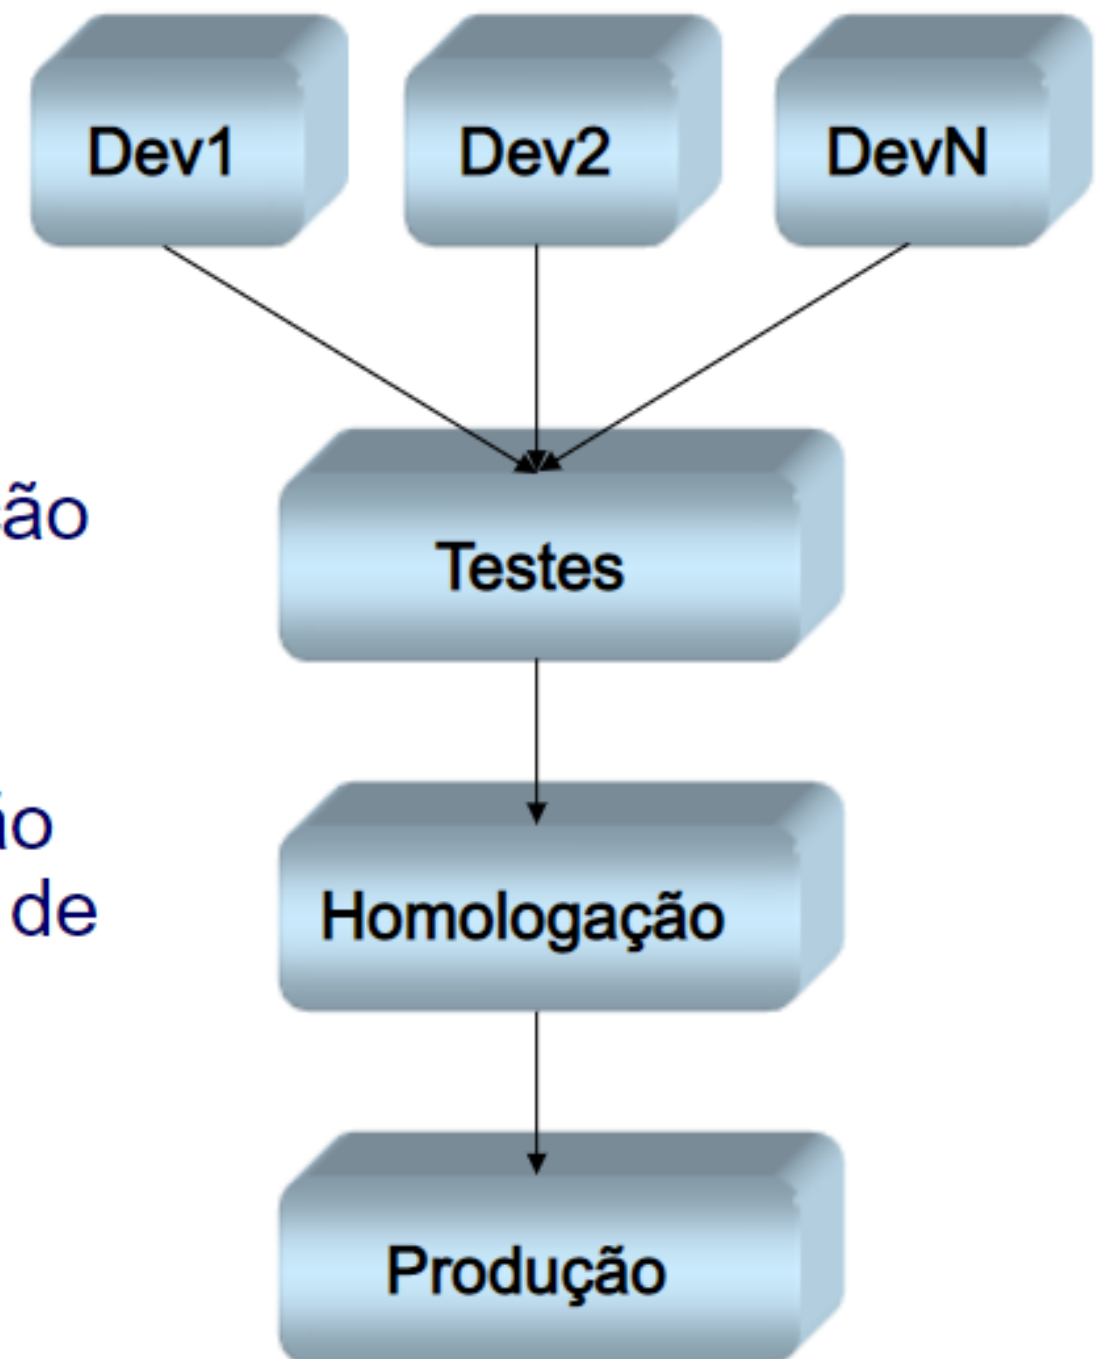

**COMO O SOFTWARE
CHEGA AO AMBIENTE
PRODUTIVO?**

<https://www.devmedia.com.br/introducao-ao-modelo-cascata/29843>

Importante lembrarmos do modelo mais tradicional de desenvolvimento de software – o “**V Model**” para entendermos sua evolução e o estágio atual dos conceitos de entrega e desenvolvimento de software.

- **Desenvolvimento**
 - Estação de trabalho dos desenvolvedores
- **Testes**
 - Ambiente para testar a integração das unidades desenvolvidas
- **Homologação**
 - Ambiente similar ao de produção utilizado para realizar os testes de aceitação
- **Produção**
 - Ambiente real de produção da aplicação

Outra denominação muito comum para o modelo tradicional de desenvolvimento de software é **Waterfall** ou Cascata em português.

No modelo tradicional de desenvolvimento o programador faz o **Build** de seu programa e entrega o executável produzido para a equipe de Operações. Esta equipe faz a **Movimentação** do programa entre os ambientes.

No modelo tradicional de desenvolvimento tínhamos uma divisão clara e distinta entre as equipes de **Desenvolvimento** e **Operações**. Hoje é consenso que havia entre os dois um “**Muro de Confusão**” causando uma série de problemas.

10 deploys per day
Dev & ops cooperation at Flickr

John Allspaw & Paul Hammond
Velocity 2009

<https://pt.slideshare.net/jallspaw/10-deploys-per-day-dev-and-ops-cooperation-at-flickr>

Porém em 2009 John Allspaw e Paul Hammond fizeram a apresentação “*10 deploys per day – Dev & Ops cooperation at Flickr*” – introduzindo o conceito de **DevOps**.

O conceito de DevOps propõe então eliminar esta barreira entre as duas equipes – principalmente através da **Automatização** dos processos de entrega de software ao ambiente produtivo.

E junto com a automação, além da maior integração entre as equipes, a ideia é que o processo de entrega de software com valor ao cliente possa ocorrer com uma frequência bem maior – baseada em um processo iterativo.

©2016 - All training materials are sole property of Van Haren Publishing BV and are not to be reproduced in any form or shape without written permission.

1.5 18

Essa nova maneira de entregar software foi impulsionada também pelo advento das metodologias ágeis (**Agile**) de desenvolvimento de software – que também propôs a entrega de software com valor em intervalos menores – num processo iterativo.

Agile Methodology

Data Scientist

also known as Data Managers, statisticians.

A data scientist will be able to take data science projects from end to end. They can help store large amounts of data, create predictive modelling processes and present the findings.

Skills: Mathematics, Programming, Communication

Will use programmes such as:
SQL, Python, R

Data Engineers

also known as database administrators and data architects.

They are versatile generalists who use computer science to help process large datasets. They typically focus on coding, cleaning up data sets, and implementing requests that come from data scientists.

Skills: Programming, Mathematics, Big data

Will use programmes such as:
Hadoop, NoSQL, and Python

Data Analysts

also known as business Analysts.

They typically help people from across the company understand specific queries with charts.

Skills: Statistics, Communication, Business knowledge

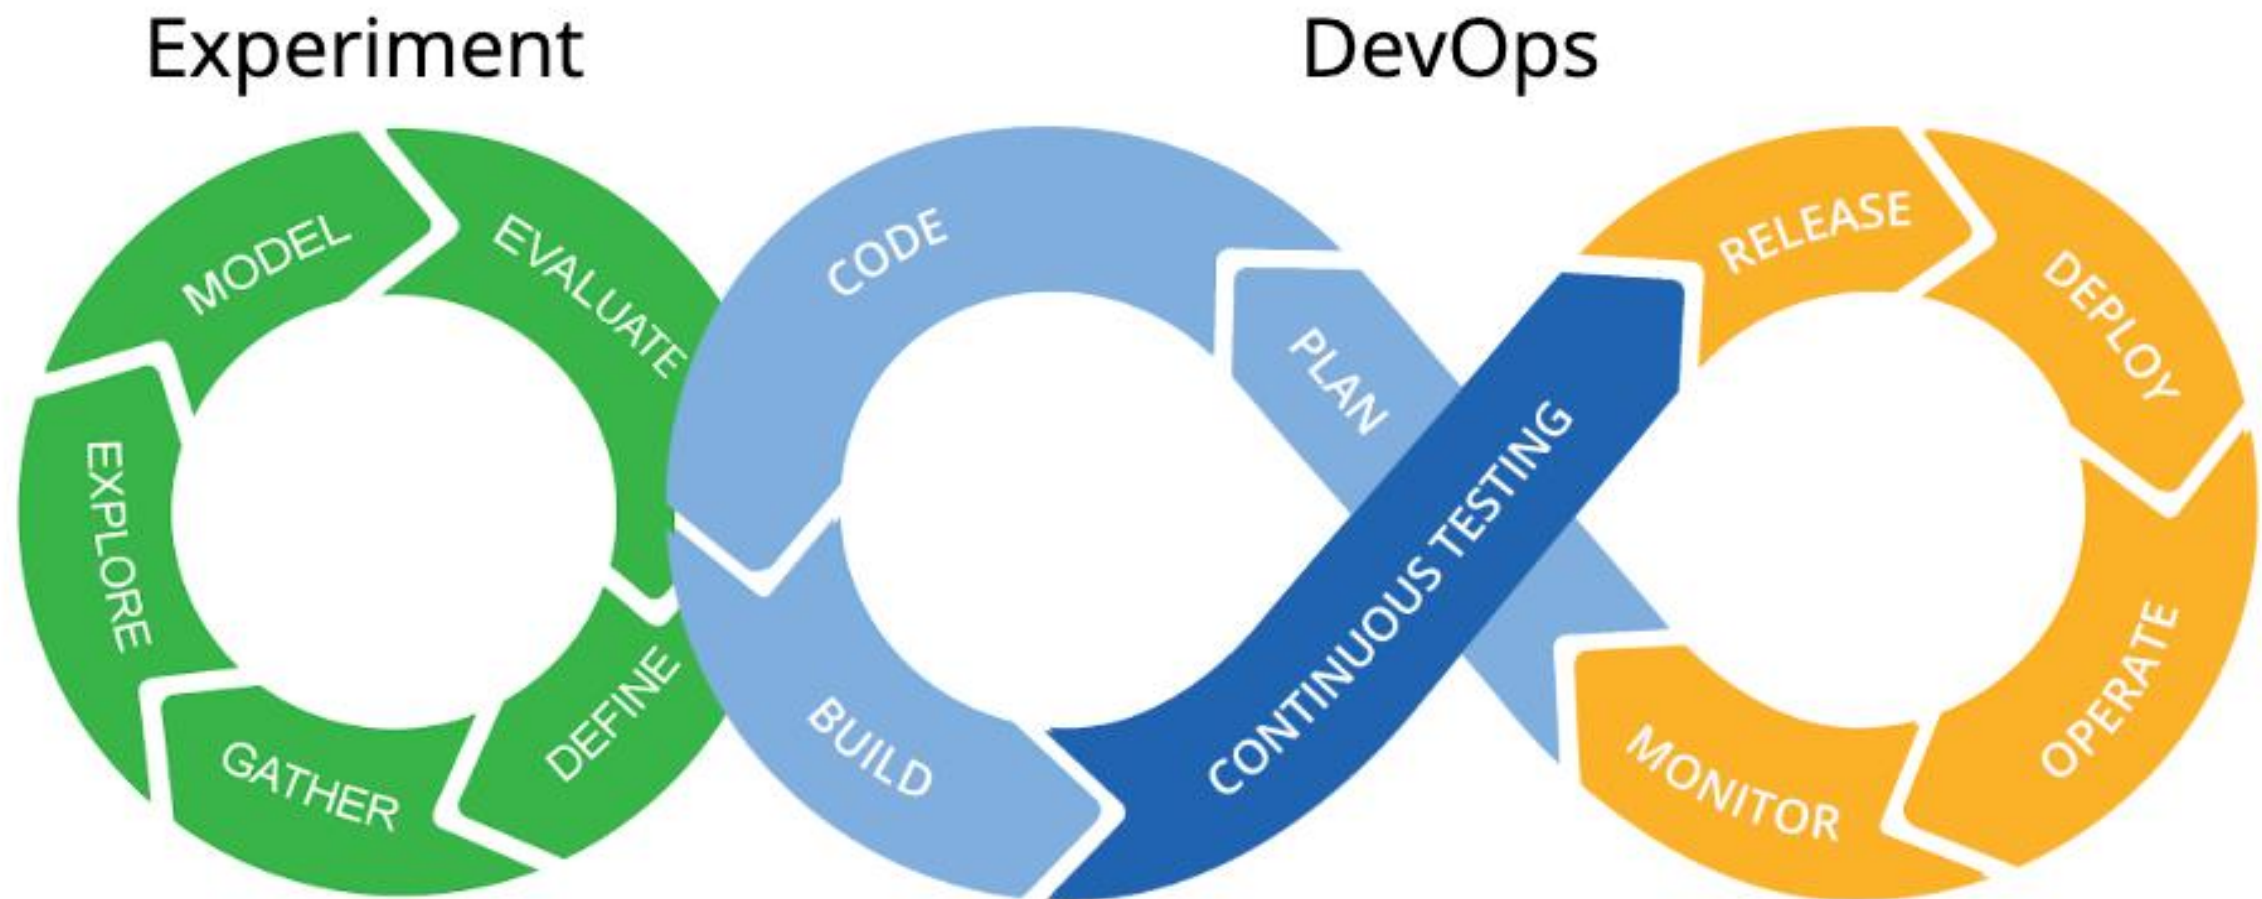

Will use programmes such as:
Excel, Tableau, SQL

DEV

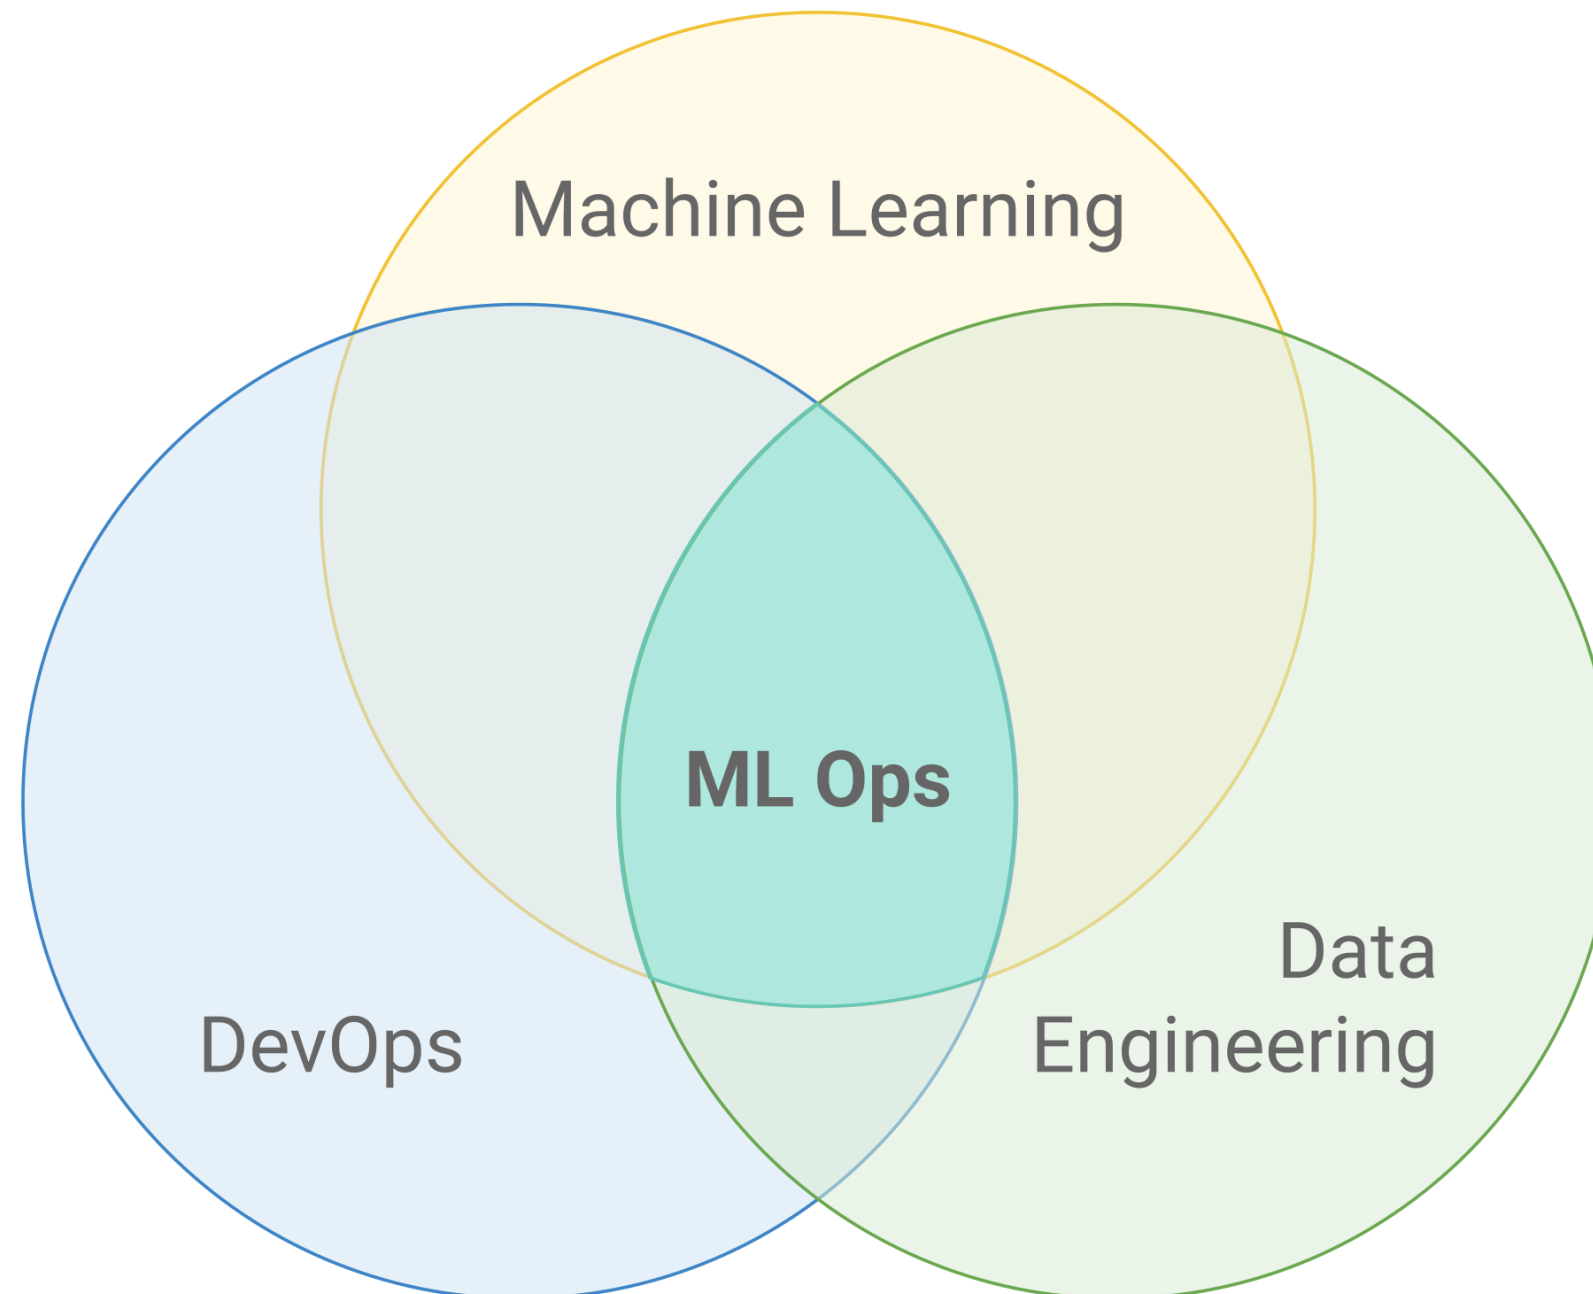

OPS

"It has been said that a data scientist is someone who is better at statistics than any software engineer, and better at software engineering than any statistician"

***MACHINE LEARNING
OPERATIONS
ML - OPS***

<https://blog.jdriven.com/2019/10/machine-learning-systems-require-paradigm-shift-in-software-engineering/>

<https://medium.com/@cbreuel/ml-ops-machine-learning-como-disciplina-de-engenharia-a058770b93dc>

O ML Ops é um conjunto de práticas que combina Machine Learning, DevOps e Engenharia de Dados, que visa implantar e manter sistemas de ML em produção de maneira confiável e eficiente.

Prática	DevOps	Engenharia de Dados	ML Ops
Controle de versões	Versionamento de código	Versionamento de código Linhagem de dados	Versionamento de código + dados + modelos (conectados)
Pipeline	n/a	Pipeline de dados/ETL	Pipeline ML de treinamento, Pipeline ML de predição
Validação de comportamento	Testes unitários	Testes unitários	Validação de modelo
CI/CD	Implanta código em produção	Implanta código do pipeline de dados	Implanta código dos pipelines de ML
Validação de dados	n/a	Validação de negócio e formato	Validação estatística
Monitoramento	Baseado em SLOs	Baseado em SLOs	SLOs + monitoramento diferencial e estatístico, em fatias

<https://medium.com/@cbreuel/ml-ops-machine-learning-como-disciplina-de-engenharia-a058770b93dc>

Como uma diferença fundamental em relação ao modelo de DevOps observamos que em ML também precisamos fazer o deploy adicional de **Dados** e **Modelos** para funcionamento e Validação da solução preditiva.

FERRAMENTAS ENVOLVIDAS

ML - OPS

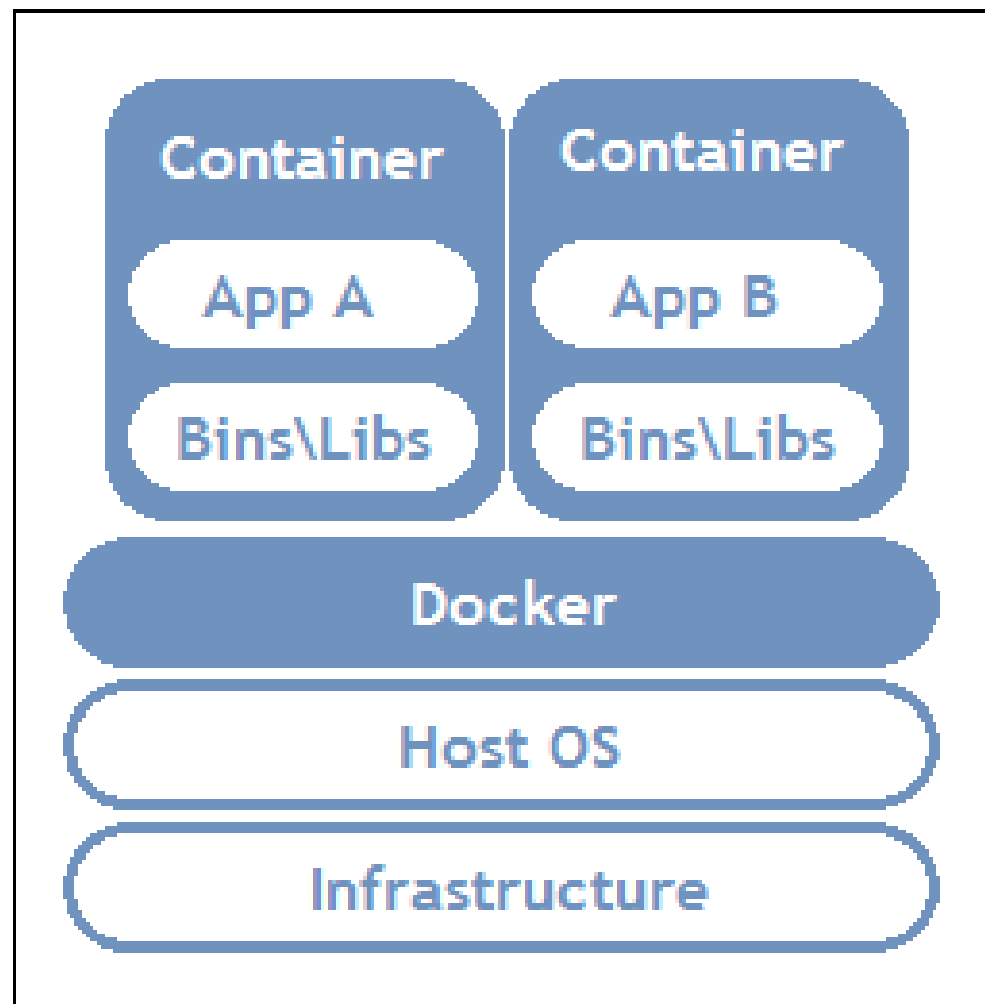

DOCKER

<https://stack.desenvolvedor.expert/appendix/docker/oqueue.html>

Docker é uma plataforma aberta, criada com o objetivo de facilitar o desenvolvimento, a implantação e a execução de aplicações em ambientes isolados. Foi desenhada especialmente para disponibilizar uma aplicação da forma mais rápida possível – com a possibilidade de escalonamento horizontal quase que imediato.

Container Based Implementation

Virtual Machine Implementation

O Docker se diferencia por trabalhar com **CONTAINERS** que podem ser entendidos como mini-máquinas virtuais - muito leves e simples que podem ser instanciadas com diferentes imagens (bases de dados, sistemas operacionais, etc). Por serem leves e diretamente conectadas ao kernel do sistema operacional elas podem rapidamente ser criadas e destruídas, otimizando a utilização do hardware.

KUBEFLOW

Kubeflow Pipelines

Kubeflow Pipelines is a platform for building and deploying portable, scalable machine learning (ML) workflows based on Docker containers.

- End-to-end orchestration: enabling and simplifying the orchestration of machine learning pipelines.
- Easy experimentation: making it easy for you to try numerous ideas and techniques and manage your various trials/experiments.
- Easy re-use: enabling you to re-use components and pipelines to quickly create end-to-end solutions without having to rebuild each time.

Kubeflow Pipelines

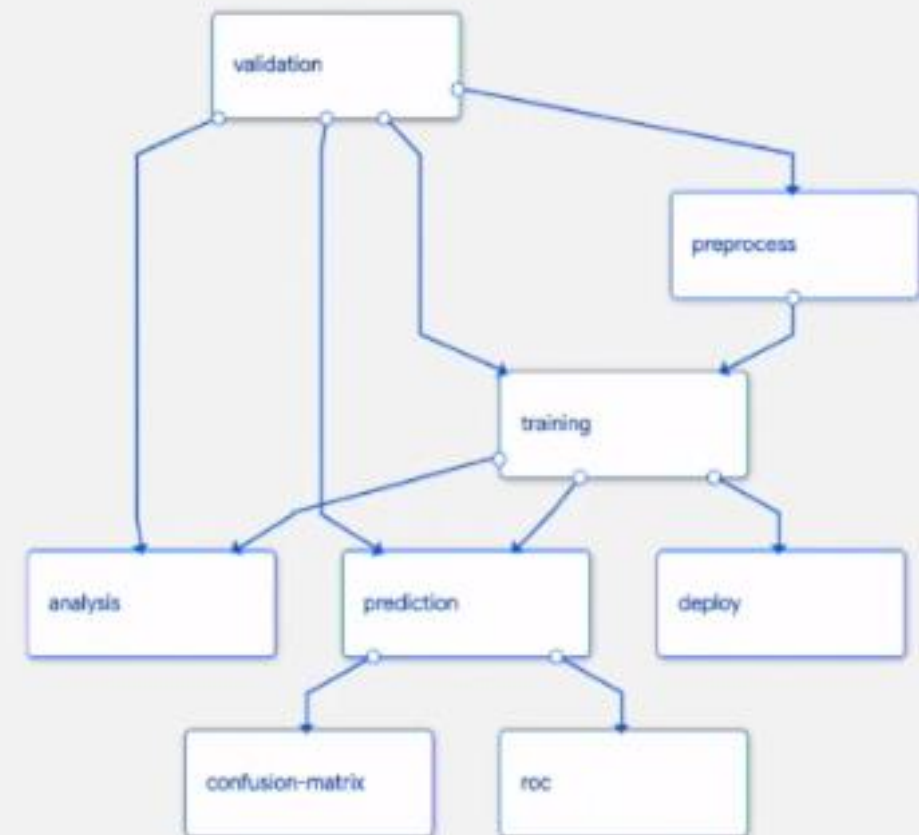

Two key takeaways : A Pipeline and a Pipeline Component

A *pipeline* is a description of a machine learning (ML) workflow, including all of the components of the workflow and how they work together.

← [Sample] ML - TFX - Taxi Tip Prediction Model Trainer

Graph

Source

Kubeflow Pipelines

Each pipeline *component* is a container that contains a program to perform the task required for that particular step of your workflow.

Entenda os modelos de serviço IaaS, PaaS e SaaS do IBM Cloud

Qual a diferença entre IaaS, PaaS e SaaS?

A diferença principal está no tipo de serviço que está sendo oferecido. Veja:

Infraestrutura como serviço (IaaS)

Um fornecedor oferece aos clientes o acesso pago por utilização ao armazenamento, à rede, aos servidores e a outros recursos computacionais em cloud.

Plataforma como serviço (PaaS)

Um provedor de serviços oferece acesso a um ambiente baseado em cloud no qual os usuários podem construir e fornecer aplicativos. O provedor fornece infraestrutura subjacente.

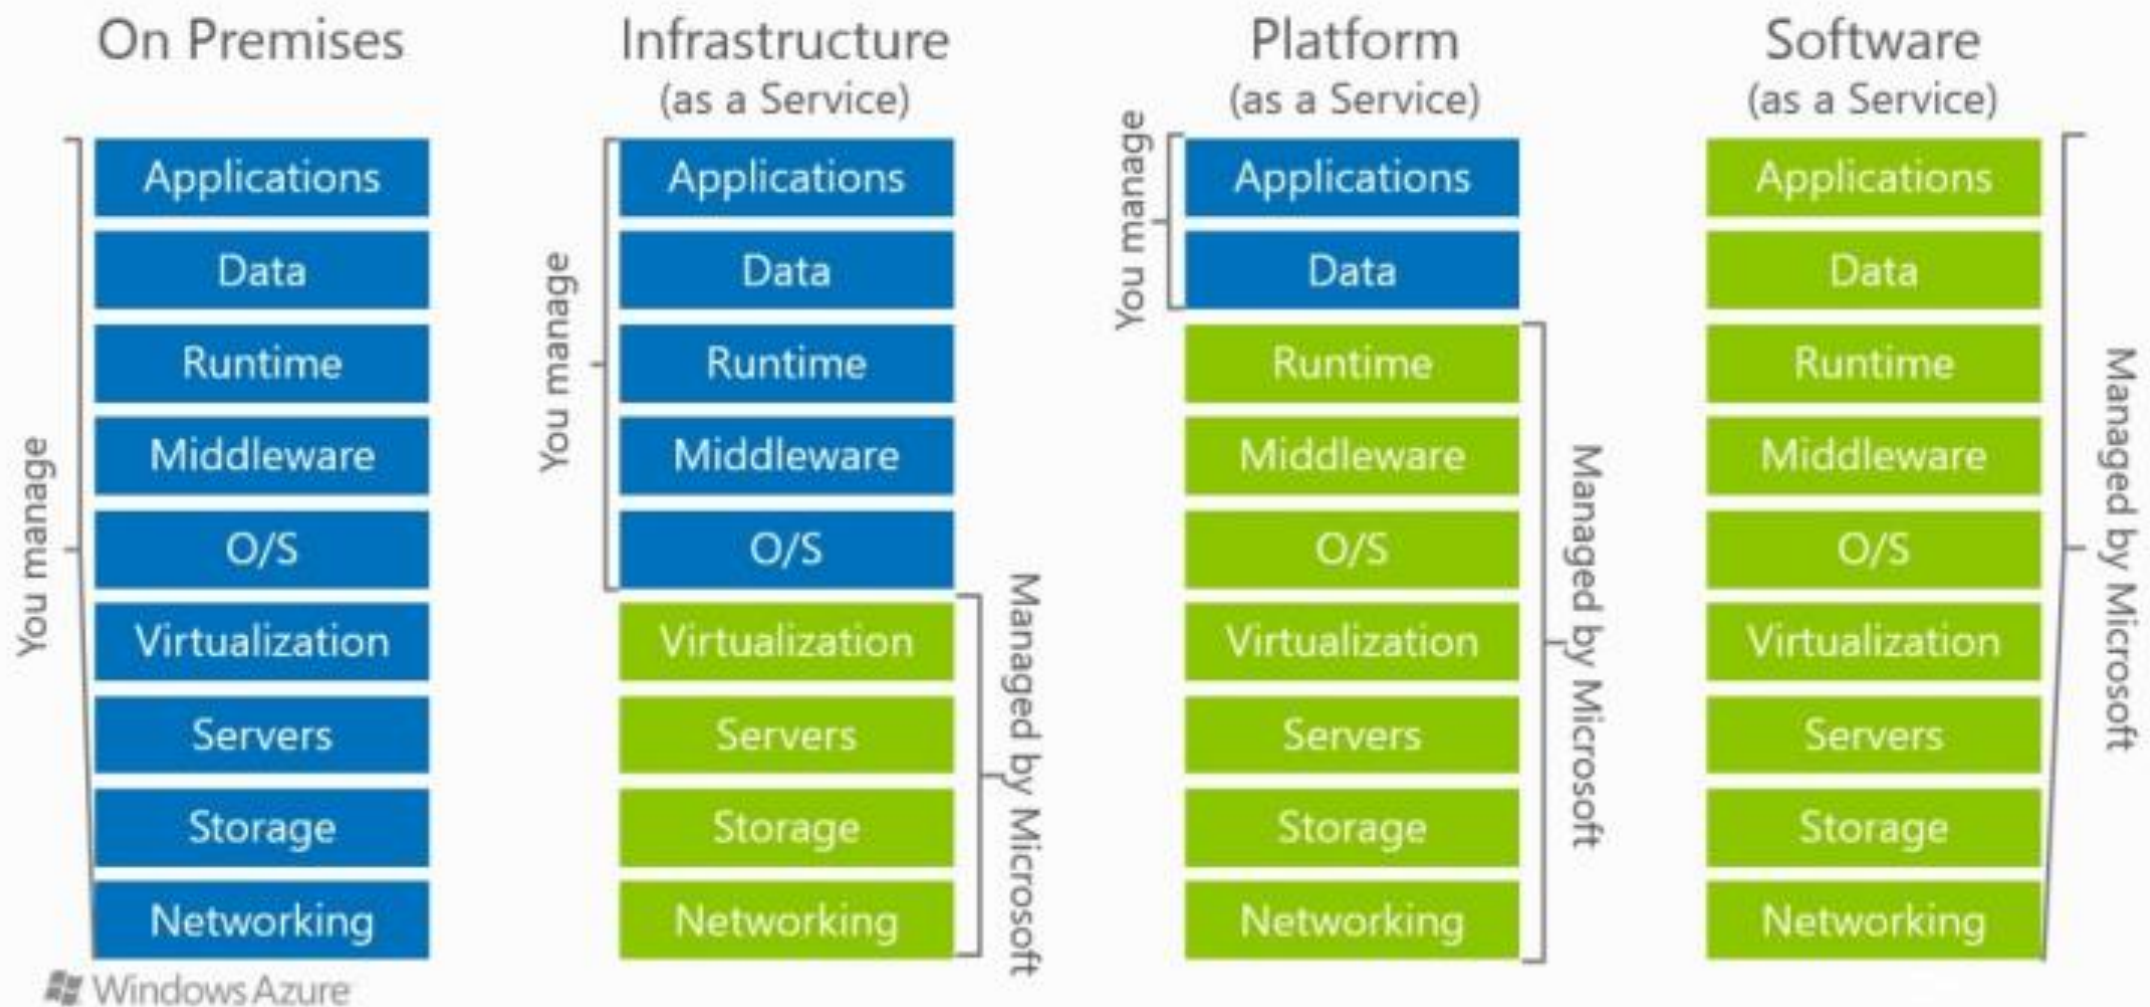

Software como serviço (SaaS)

Um provedor de serviços oferece software e aplicativos por meio da Internet. Os usuários subscrevem ao software e o acessam por meio da web ou de APIs do fabricante.

JUPYTER NOTEBOOKS
EM PRODUÇÃO

The image shows a YouTube video player interface. The video content is a presentation slide titled "Jupyter Notebook". On the left side of the slide, there is a photo of a man speaking at a podium and the "PyData Austin 2019" logo. The main part of the slide lists five features of Jupyter Notebooks, each with an icon and a brief description.

Jupyter Notebook

- Simple, but Powerful**
As simple as opening a web page, with the capabilities of a powerful, multilingual, development environment.
- Interactive widgets**
Code can produce rich outputs such as images, videos, markdown, LaTeX and JavaScript. Interactive widgets can be used to manipulate and visualize data in real-time.
- Language of choice**
Jupyter Notebooks have support for over 50 programming languages, including those popular in Data Science, Data Engineer, and AI such as Python, R, Julia and Scala.
- Big Data Integration**
Leverage Big Data platforms such as Apache Spark from Python, R and Scala. Explore the same data with pandas, scikit-learn, ggplot2, dplyr, etc.
- Share Notebooks**
Notebooks can be shared with others using e-mail, Dropbox, Google Drive, GitHub, etc

nbconvert

Jupyter Notebook Conversion

[Google Group](#) [build failing](#) [docs passing](#) [docs passing](#) [codecov 92%](#) [PASSED](#)

The **nbconvert** tool, `jupyter nbconvert`, converts notebooks to various other formats via [Jinja](#) templates. The nbconvert tool allows you to convert an `.ipynb` notebook file into various static formats including:

- HTML
- LaTeX
- PDF
- Reveal JS
- Markdown (md)
- ReStructured Text (rst)
- executable script

<https://pypi.org/project/nbconvert/>

Notebook Pipelines using NBConvert

Jupyter NBConvert enables executing and converting notebooks to different file formats.

Advantages

- Support notebook chaining
- Convert results to immutable formats

Limitations

- No support for parameters

Jupyter NBConvert

<https://nbconvert.readthedocs.io/en/latest/>

```
$ pip install nbconvert
```

```
$ jupyter nbconvert --to html --execute overview_with_run.ipynb
```

```
[NbConvertApp] Converting notebook overview_with_run.ipynb to html
```

```
[NbConvertApp] Executing notebook with kernel: python3
```

```
[NbConvertApp] Writing 300558 bytes to overview_with_run.html
```

```
$ open overview_with_run.html
```

Papermill

Papermill is an open source tool contributed by Netflix which enables parameterizing, executing, and analyzing Jupyter Notebooks.

Papermill lets you:

- Parameterize notebooks
- Execute notebooks

(NA INTERNET)**

Streamlit.

The fastest way to build data apps

Streamlit's open-source app framework is the easiest way for data scientists and machine learning engineers to create beautiful, performant apps in only a few hours! All in pure Python. All for free.

<https://www.streamlit.io/>

```
pip install streamlit
```

Observação – poderá ser necessário colocar o caminho do streamlit.exe no PATH (Windows)

C:\Users\[**USUÁRIO**]\AppData\Roaming\Python\Python37\Scripts

```
(base) C:\streamlit>streamlit hello

Welcome to Streamlit. Check out our demo in your browser.

Local URL: http://localhost:8501
Network URL: http://192.168.0.10:8501

Ready to create your own Python apps super quickly?
Just head over to https://docs.streamlit.io

May you create awesome apps!
```

Vamos rodar o “Hello World” do Streamlit no prompt e ver o resultado no Browser:

- > streamlit hello

Depois iremos rodar também:

> streamlit run tutorial.py

> streamlit run bandrec-streamlit.py

```
Procfile x
1 web: sh setup.sh && streamlit run --server.port $PORT bandrec-streamlit.py
2
```

Procfile – indica os comandos que vão ser executados

```
requirements.txt x
1 numpy==1.17.3
2 pandas==1.0.5
3 streamlit==0.62.0
4 scipy==1.4.1
5 fuzzywuzzy==0.18.0
6 sklearn
7
```

requirements.txt – libs a serem instaladas

```
setup.sh x
1 mkdir -p ~/.streamlit/
2
3 echo "\
4 [server]\n\
5 headless = true\n\
6 port = $PORT\n\
7 enableCORS = false\n\
8 \n\
9 " > ~/.streamlit/config.toml
```

setup.sh – preparação e configuração do ambiente

**VAMOS COLOCAR UM
WEB SERVICE EM PRODUÇÃO
(NA INTERNET)**

Agora vamos criar um webservice com o Flask e fazer o deploy do mesmo no Heroku.

Descompactar arquivos em webservice.zip e abrir o notebook **deploy_api_heroku_v1.ipynb** no Jupyter.
